Abstract class names should comply with a naming convention

Code Smell

Strings literals should be placed on the left side when checking for equality

Code Smell

Files should contain an empty newline at the end

Code Smell

Source code should be indented consistently

Code Smell

A close curly brace should be located at the beginning of a line

Code Smell

Close curly brace and the next "else", "catch" and "finally" keywords should be on two different lines

Code Smell

Close curly brace and the next "else", "catch" and "finally" keywords should be located on the same line

Code Smell

An open curly brace should be located at the beginning of a line

Code Smell

An open curly brace should be located at the end of a line

Code Smell

Tabulation characters should not be used

Code Smell

Functions should not be defined with a variable number of arguments

Code Smell

The value returned from a stream read should be checked

Analyze your code

BugMinorcert

You cannot assume that any given stream reading call will fill the `byte[]` passed in to the method. Instead, you must check the value returned by the `read` method to see how many bytes were read. Fail to do so, and you introduce bug that is both harmful and difficult to reproduce.

Similarly, you cannot assume that `InputStream.skip` will actually skip the requested number of bytes, but must check the value returned from the method.

This rule raises an issue when an `InputStream.read` method that accepts a `byte[]` is called, but the return value is not checked, and when the return value of `InputStream.skip` is not checked. The rule also applies to `InputStream` child classes.

Noncompliant Code Example

```
public void doSomething(String fileName) {
    try {
        InputStream is = new InputStream(file);
        byte [] buffer = new byte[1000];
        is.read(buffer); // Noncompliant
        // ...
    } catch (IOException e) { ... }
}
```

Compliant Solution

```
public void doSomething(String fileName) {
    try {
        InputStream is = new InputStream(file);
        byte [] buffer = new byte[1000];
        int count = 0;
        while (count = is.read(buffer) > 0) {
            // ...
        }
    } catch (IOException e) { ... }
}
```
