Dropped: Procedure Syntax

[✎ Edit this page on GitHub](#)

Procedure syntax

```
def f() { ... }
```

has been dropped. You need to write one of the following instead:

```
def f() = { ... }  
def f(): Unit = { ... }
```

Scala 3 accepts the old syntax under the `-source:3.0-migration` option. If the `-migration` option is set, it can even rewrite old syntax to new. The [Scalafix](#) tool also can rewrite procedure syntax to make it Scala 3 compatible.
