Abstract class names should comply with a naming convention

Code Smell

Strings literals should be placed on the left side when checking for equality

Code Smell

Files should contain an empty newline at the end

Code Smell

Source code should be indented consistently

Code Smell

A close curly brace should be located at the beginning of a line

Code Smell

Close curly brace and the next "else", "catch" and "finally" keywords should be on two different lines

Code Smell

Close curly brace and the next "else", "catch" and "finally" keywords should be located on the same line

Code Smell

An open curly brace should be located at the beginning of a line

Code Smell

An open curly brace should be located at the end of a line

Code Smell

Tabulation characters should not be used

Code Smell

Functions should not be defined with a variable number of arguments

Code Smell

### Return values should not be ignored when they contain the operation status code

Analyze your code

Bug

Minor

cwe error-handling cert

When the return value of a function call contains the operation status code, this value should be tested to make sure the operation completed successfully.

This rule raises an issue when the return values of the following are ignored:

- java.io.File operations that return a status code (except mkdirs)
- Iterator.hasNext()
- Enumeration.hasMoreElements()
- Lock.tryLock()
- non-void Condition.await\* methods
- CountDownLatch.await(long, TimeUnit)
- Semaphore.tryAcquire
- BlockingQueue: offer, remove

#### Noncompliant Code Example

```
public void doSomething(File file, Lock lock) {
    file.delete(); // Noncompliant
    // ...
    lock.tryLock(); // Noncompliant
}
```

#### Compliant Solution

```
public void doSomething(File file, Lock lock) {
    if (!lock.tryLock()) {
        // lock failed; take appropriate action
    }
    if (!file.delete()) {
        // file delete failed; take appropriate action
    }
}
```
