"Stream.collect()" calls should not be redundant

Analyze your code

Code Smell

Minor

clumsy

When using the stream API, call chains should be simplified as much as possible to improve readability and maintainability.

This rule raises an issue when one of the following substitution can be made:

Original	Preferred
stream.collect(counting())	stream.count()
stream.collect(maxBy(comparator))	stream.max(comparator)
stream.collect(minBy(comparator))	stream.min(comparator)
stream.collect(mapping(mapper))	stream.map(mapper).collect()
stream.collect(reducing(...))	stream.reduce(...)
stream.collect(summingInt(mapper))	stream.mapToInt(mapper).sum()
stream.collect(summingLong(mapper))	stream.mapToLong(mapper).sum()
stream.collect(summingDouble(mapper))	stream.mapToDouble(mapper).sum()

Noncompliant Code Example

```
int count = stream.collect(counting()); // Noncompliant
```

Compliant Solution

```
int count = stream.count();
```
