Vulnerability

Collections should not be modified while they are iterated

Bug

Equals method should be overridden in records containing array fields

Bug

Reflection should not be used to increase accessibility of records' fields

Locks should be released

Analyze your code

Bug Critical ? cwe multi-threading

If a lock is acquired and released within a method, then it must be released along all execution paths of that method.

Failing to do so will expose the conditional locking logic to the method's callers and hence be deadlock-prone.

Noncompliant Code Example

```
public class MyClass {
    public void doSomething() {
        Lock lock = new Lock();
        lock.lock(); // Noncompliant
        if (isInitialized()) {
            // ...
            lock.unlock();
        }
    }
}
```

Compliant Solution

```
public class MyClass {
    public void doSomething() {
        Lock lock = new Lock();
        if (isInitialized()) {
            lock.lock();
            // ...
            lock.unlock();
        }
    }
}
```
