Operator should be used instead of simple "instanceof" + cast

Code Smell

Call to Mockito method "verify", "when" or "given" should be simplified

Code Smell

Character classes should be preferred over reluctant quantifiers in regular expressions

Code Smell

Consecutive AssertJ "assertThat" statements should be chained

Code Smell

Chained AssertJ assertions should be simplified to the corresponding dedicated assertion

Code Smell

Exception testing via JUnit @Test annotation should be avoided

Code Smell

Escape sequences should not be used in text blocks

Code Smell

Simple string literal should be used for single line strings

Code Smell

Boxed "Boolean" should be avoided in boolean expressions

Code Smell

Type parameters should not shadow other type parameters

Code Smell

"read(byte[],int,int)" should be overridden

Code Smell

An iteration on a Collection should be

Collections should not be passed as arguments to their own methods

Analyze your code

BugMajor?

Passing a collection as an argument to the collection's own method is either an error - some other argument was intended - or simply nonsensical code.

Further, because some methods require that the argument remain unmodified during the execution, passing a collection to itself can result in undefined behavior.

Noncompliant Code Example

```
List <Object> objs = new ArrayList<Object>();
objs.add("Hello");

objs.add(objs); // Noncompliant; StackOverflowException if o
objs.addAll(objs); // Noncompliant; behavior undefined
objs.containsAll(objs); // Noncompliant; always true
objs.removeAll(objs); // Noncompliant; confusing. Use clear(
objs.retainAll(objs); // Noncompliant; NOOP
```
