Abstract class names should comply with a naming convention

Code Smell

Strings literals should be placed on the left side when checking for equality

Code Smell

Files should contain an empty newline at the end

Code Smell

Source code should be indented consistently

Code Smell

A close curly brace should be located at the beginning of a line

Code Smell

Close curly brace and the next "else", "catch" and "finally" keywords should be on two different lines

Code Smell

Close curly brace and the next "else", "catch" and "finally" keywords should be located on the same line

Code Smell

An open curly brace should be located at the beginning of a line

Code Smell

An open curly brace should be located at the end of a line

Code Smell

Tabulation characters should not be used

Code Smell

Functions should not be defined with a variable number of arguments

Code Smell

Classes should not have too many fields

Analyze your code

Code Smell

Major ?

brain-overload

A class that grows too much tends to aggregate too many responsibilities and inevitably becomes harder to understand and therefore to maintain, and having a lot of fields is an indication that a class has grown too large.

Above a specific threshold, it is strongly advised to refactor the class into smaller ones which focus on well defined topics.
