A "for" loop update clause should move the counter in the right direction

 Bug

Non-public methods should not be "@Transactional"

 Bug

Servlets should not have mutable instance fields

 Bug

"toString()" and "clone()" methods should not return null

 Bug

".equals()" should not be used to test the values of "Atomic" classes

 Bug

Return values from functions without side effects should not be ignored

 Bug

Child class methods named for parent class methods should be overrides

 Bug

Inappropriate "Collection" calls should not be made

 Bug

Silly equality checks should not be made

 Bug

Dissimilar primitive wrappers should not be used with the ternary operator without explicit casting

 Bug

"InterruptedException" should not be ignored

 Bug

Instance methods should not write to "static" fields

Analyze your code

Code Smell

Critical

multi-threading

Correctly updating a static field from a non-static method is tricky to get right and could easily lead to bugs if there are multiple class instances and/or multiple threads in play. Ideally, static fields are only updated from synchronized static methods.

This rule raises an issue each time a static field is updated from a non-static method.

Noncompliant Code Example

```
public class MyClass {  
  
    private static int count = 0;  
  
    public void doSomething() {  
        //...  
        count++; // Noncompliant  
    }  
}
```
